COMMUNITY EVENTS

Signing books for the Guinness Book
April 16
CSU Bookstore, Lory Student Center
CSU alum Ryan Avery hopes to sign 5,000 copies of his book, Speaker, Leader, Champion: Succeed at Work Through the Power of Public Speaking, in hopes of winning the Guinness Book of World Records award for "Largest Book Signing in History." (The current record is 4,649 books in one sitting.) The all-day event be live streamed online and broadcast on KCSU. Find out more at csuworldrecord.com

Earth Week
April 17-25
CSU is such a green University, one Earth Day is not enough. The nation’s No. 1 university for sustainability will host a number of environmentally friendly events during Earth Week; see page 6 for highlights or go to green.colostate.edu/earth-week.aspx for a complete schedule.

I Love CSU Day
April 18
Isn’t every day I Love CSU? See Events page 7

April showers bring May Flowers
by Kyla Skye Allmon

As the days grow longer and warmer, part of the CSU community is hard at work to bring a little more color and beauty to campus. Now that April has arrived, the department of horticulture and landscape architecture is preparing the campus for multitudes of color at the Trial Gardens across from the University Center for the Arts.

Jim Klett, director of the plant and environmental research center, provides the ins and outs of the process, and how this special part of campus is brought to life.

Hundreds of colorful flowers have been found at the corner of College and Lake for 13 years. “For 20 years prior to that we had them over at the plant and environmental research center,” Klett said. The gardens were moved to procure more space and in a more visible location.

More space was needed because the number of entries increased as the floriculture industry in Colorado changed. “The industry wanted to have more information about how bedding plants and perennials perform in Colorado’s climate,” Klett said. Colorado has a unique environment for growing due to its high light intensity and low humidity. Interest in how shade plants perform in Colorado has also grown and become a larger part of the Trial gardens. “Currently in the past couple years we’ve had close to 1,100 bedding plants and 500-600 container plants,” Klett said.

The interest in containers grew as the interests and lifestyles of the Colorado community changed. Containers are greatly used for patio and yard décor. Toward the end of each growing season in late July or early August, the flowers face off in a ‘best-of’

See Trial Gardens page 9

Rams to the bone
by Kate Hawthorne Jeracki

It can be easy to lend casual support to good causes. But what happens when you, personally, are called on to give more than a few hours of your time or a couple of bucks – maybe give the gift of life itself?

Brett Baeverstad knows. The CSU junior went from a supporter of bone marrow donation to an actual donor after a simple cheek swab identified him as a perfect match – for a perfect stranger.

GIVING

Through his service fraternity, Phi Kappa Theta, Brett helps organize an on-campus bone marrow donor registration drive. They have added 300 potential donors to the National Marrow Registry Program in the past two years.

During the February 2013 drive, he went through the five-minute cheek swab, knowing there was less than a 1 percent chance that he’d be a match to a waiting recipient.

“So the Fort Collins native was surprised four months later when he got a call asking him to take a follow-up blood test. "They do tissue typing and look at other factors that show that the patient can accept the cells,” Brett explained. “I knew it was pretty special to go through the confirmation, but I really didn’t know what to think. I didn’t know what I was getting into.”

CSU Life
for Faculty & Staff

April 2014

Photo headline

CSU’s parade float celebrated a partnership with the Fort Collins Museum of Discovery on its new live animal exhibits. Colorado State University students, scientists, and faculty volunteered their scientific expertise to the Museum as caretakers and consultants for the exhibits featuring amphibians, arthropods, fish, mammals and reptiles.

As the days grow longer and warmer, part of the CSU community is hard at work to bring a little more color and beauty to campus. Now that April has arrived, the department of horticulture and landscape architecture is preparing the campus for multitudes of color at the Trial Gardens across from the University Center for the Arts.

Jim Klett, director of the plant and environmental research center, provides the ins and outs of the process, and how this special part of campus is brought to life.

Hundreds of colorful flowers have been found at the corner of College and Lake for 13 years. “For 20 years prior to that we had them over at the plant and environmental research center,” Klett said. The gardens were moved to procure more space and in a more visible location.

More space was needed because the number of entries increased as the floriculture industry in Colorado changed. “The industry wanted to have more information about how bedding plants and perennials perform in Colorado’s climate,” Klett said. Colorado has a unique environment for growing due to its high light intensity and low humidity. Interest in how shade plants perform in Colorado has also grown and become a larger part of the Trial gardens. “Currently in the past couple years we’ve had close to 1,100 bedding plants and 500-600 container plants,” Klett said.

The interest in containers grew as the interests and lifestyles of the Colorado community changed. Containers are greatly used for patio and yard décor. Toward the end of each growing season in late July or early August, the flowers face off in a ‘best-of’

See Trial Gardens page 9
OFFICE OF BUDGETS
The Colorado State University Employee Appreciation Board recognized the Budget Office at CSU as an outstanding unit on campus. The small staff does the budgetary work for the entire campus – for all units, departments, divisions, and colleges – and even when they’re dealing with difficult issues around funding, they are known for being calm, helpful, and informative. During their busiest season (June through July), their days are long and may include weekends and holidays, but there are never complaints about the extra time, just that “it’s the nature of the business.”

ENVIRONMENTAL HEALTH SERVICES
The Chemical Management Office within Environmental Health Services was recently recognized by the Employee Appreciation Board and treated to breakfast and door prizes. The unit cleans up chemicals and chemical waste in the 700+ labs on campus and disposes of toxins properly. The work is challenging, as the unit must adhere to many regulations enforced by Homeland Security and the Environmental Protection Agency. Offices and labs on the Fort Collins campus and across the state come under its purview. They’ve also created a database that tracks every chemical used throughout the University, which alerts them to substances that are not accounted for.

FACILITIES MANAGEMENT
On March 14, the CSU Employee Appreciation Board held a recognition event, complete with pizza for all, to honor the employees of Laurel Hall for their successful efforts to significantly reduce their energy usage throughout the building. Over the course of an 8-month challenge with residents of Ammons Hall, Laurel Hall took the team approach as Janet Porter, Julia Helminiak, Scot Smith, Scott Allen, Shauna DeLuca and Brian Heinold worked together to get the word out to fellow occupants of Laurel Hall, encouraging all to participate in the effort to conserve energy. Team Laurel Hall saved (8,951 kWh) during the challenge, which was enough to power an average Fort Collins home for a year!

WARNER COLLEGE OF NATURAL RESOURCES
Melinda Laituri, professor of geography in the Department of Ecosystem Science and Sustainability, has been selected as a 2014 Jefferson Science Fellow. In this position, Laituri will serve as a science advisor for U.S. foreign policy to the U.S. Department of State and the U.S. Agency for International Development. She will begin her one-year term in August 2014 and will work on water-related policy issues that include the University WASH Consortium, water data integration efforts, and gender issues related to access to water. Laituri has taught at CSU for 19 years, and teaches courses such as sustainable watersheds, watershed science, geographic information systems and geography of hazards. She is also a professor in an interdisciplinary natural resources immersion field course that teaches ecological field measurements at CSU’s mountain campus, Pingree Park, each summer.
Longtime employees honored for their CSU service

Celebrate! CSU Milestones honors University employees for years of service and retirement. This year’s event will be held on April 30, 4 p.m., in the Hilton Fort Collins Ballroom.

Among the many, many employees to be recognized, we have selected just a few to feature here. To see more and longer stories about the people who make CSU work, written by Geneva Mueller, go to Today @ Colorado State – www.today.colostate.edu – and search for Celebrate!

Joe Stevens, 15 years

It’s clear that Joe Stevens, the ecology team leader for the Colorado Natural Heritage Program in the Warner College of Natural Resources, has received much more than just his degree at CSU. He came to Fort Collins in 1982 to obtain his degree in natural resource management. Originally from Ohio, Joe grew up in an environment that inspired him to pursue the career that he now holds.

“Where I grew up, there were a lot of forests and open spaces around my home. My brothers and I spent all our time playing in the woods,” Stevens said. “I think that was part of it; I really enjoyed being outside and really learned a lot about nature by being outdoors.”

After earning his undergraduate degree at CSU, he spent time in North Carolina, and worked for a decade as a consultant before working for the University. Looking back on 15 years at CSU, Stevens has enjoyed reconnecting with people that he initially met while obtaining his first degree at the University. Looking ahead, he sees himself continuing to work here at CSU, although potentially in a different realm. As he and his team have been producing remote sensing maps of vegetation for the National Park Service for many years, much of the work in that area has been completed. Stevens is interested in getting involved with time series data and future projections of climate change on the composition and structure of vegetation.

“In addition to Fort Collins being a great place [to live], the University is a fantastic place to work, just because the work/life balance is important to me, and that’s recognized within the University,” Stevens said.

For Director of Safety and Support Assessment Dwight Burke, Colorado State University transformed from his place of learning to his employer very rapidly.

A Pueblo native, Burke came to Colorado State in 1984 to obtain his degree in natural resource management with a minor in hydrology. He was first employed by the University in 1985 as a part of Housing & Dining Services. In 1987, he was hired by the CSU Police Department as a student police officer, a job that would inspire a lifelong commitment. Burke graduated in 1989 and subsequently accepted a full-time position with the CSU PD.

He spent 11 years assigned to the drug task force with Larimer County and then became the investigations sergeant for the CSU/PD before accepting his current position as the director of safety and support assessment. Burke and his team are charged with creating and implementing support plans for any individuals who may exhibit signs of distress or risk. He said the most rewarding part of the job is seeing those he works with ultimately find success at CSU.

“If I think back to my undergraduate experience in the ‘80s, that close-knit feel is probably stronger than it was when I came,” Burke said. “I feel that we’ve actually done both — we’ve grown, but it made it smaller at the same time. And I think the compassion for people has grown drastically over the years. When I look today at what we invest in the members of our community, it’s a lot different than what it was 25 years ago.”

Paola Malpezzi Price, 30 years

Paola was in high school in Italy when she applied, was accepted, and completed her third year of high school in Newport, Oregon.

“At 17 years of age, she threw herself into the experience whole-heartedly, becoming the homeowner queen, playing volleyball, joining both the German club and the pep club and, of course, dating a young American. Three years later, they were engaged.”

For the chair of the Department of Foreign Languages and Literatures, her travels have been both the soundtrack and the script to her life’s accomplishments.

Paola was in high school in Italy when her English teacher recommended that she apply for a study-abroad scholarship through American Field Service. She applied, was accepted, and completed her third year of high school in Newport, Oregon.

“In addition to Fort Collins being a great place [to live], the University is a fantastic place to work, just because the work/life balance is important to me, and that’s recognized within the University,” Stevens said.

Paola Malpezzi Price, 30 years

Zella Brink has Colorado in her blood. Not only was she born and raised only 40 miles from Fort Collins in Livermore, she still lives in the house that she grew up in. Her great-grandfather came to Colorado in 1882 and was a homesteader on the land that has been in her family ever since.

Brink, who works as a technician in the Department of Biomedical Sciences, was originally hired by CSU to build a fence around the animal reproduction facilities. Her background with large animals and livestock, Brink led to her being hired on to assist in the embryo transfer process in the bovine reproduction center in February 1979.

“What we’re doing now is working with [embryo transfer in] the pure bison out of Yellowstone,” she says. “Chances are that it’ll never get commercially done with bison because they’re so difficult to handle, but what we’re trying to do is preserve the genetics. We hope to have a bank of embryos that we could put in the seed bank that are just pure bison.”

Brink feels fortunate to have found a job where she has been appreciated and where she has been afforded the opportunity to learn and grow. Ultimately, this is what has kept her here for three and a half decades.

“It just feels like the place for me to be,” Brinks says. “I still feel like I’m contributing to it. I still have that same work ethic. If I’m needed, I’ll be there.”
Bone Marrow

Bone marrow donors give gift of life

From page 1

Brett read all the literature he could find on bone marrow transplants. He learned there was still a 1-in-8 chance of being a match after the confirmation testing. So when he heard just before fall semester started that he was the best possible match for a particular patient, he was very excited.

"At first I was nervous and scared, but with support from my family and my church, I got more comfortable with the idea," Brett said. "I couldn't have got through it without all the support of so many people who were behind me." His parents live in Fort Collins, his sister is a sophomore studying Biomedical Sciences at CSU, and his brother plans to come to CSU this year.

Staying healthy

While he was waiting to donate, Brett said he became very careful about staying healthy, even carrying bug spray at all times to ward off mosquitoes that could carry West Nile virus. Five days before he was scheduled to donate, he received injections to boost his stem cells and pull white cells into the blood.

The procedure Brett underwent was a peripheral blood stem cell or PBSC donation. The five-hour outpatient procedure involved IVs in both arms, one to receive his cell-packed blood and one to return the PBSC-free blood back into his body.

The actual donation occurred on Brett's 21st birthday.

"It was meant to be," he said.

Professor Nick Fisk was not at all surprised to hear of Brett's decision. Brett has worked in Fisk's synthetic biology lab since his first year on campus, and "he's a classic all-around good guy," Fisk said.

Brett said he now looks at the work in the lab — finding new proteins that can be used as markers to detect disease — in his career in a different light.

"I enjoy the engineering and research side more than the medicine, but I really want to help people," he said. "I'm thankful that I could make such a difference in someone's life."

Part of the donation protocol is strict privacy. Brett will never learn the outcome of the procedure unless the recipient decides to contact him, and that's not allowed for at least a year following the procedure.

Brett did receive a preliminary update that his cells have begun building healthy cells in the recipient's body. Another update is scheduled to six to seven months after the transplant.

RECEIVING

Brett may never meet the person who received his cells, but someone who knows how important a gift it is, firsthand, is Adele Howe. A professor of Computer Sciences, Adele passed the two-year anniversary of her transplant in November.

Adele developed acute myeloid leukemia, a cancer of the blood, as the result of chemotherapy for breast cancer. She was diagnosed 18 months after the end of treatment.

"AML is very dangerous," she said. "It can kill you in two weeks, so I was hospitalized within a week. A bone marrow transplant is the only treatment option."

Adele was in the hospital for seven weeks to get into remission; the search for a donor took more than four months. It took three tries to find a suitable donor.

"In the first round, they couldn't find two of the donors for additional testing, and another declined the medical exam," Adele said. "In the second round, at the eleventh hour they discovered a serious mismatch that was not acceptable, and another potential donor had an infection at the time the donation was scheduled. They finally found an acceptable, but not perfect, match in Europe.

"Each time we thought we had a donor, I was just days from starting the chemotherapy that essentially wipes out your immune system so your body won't reject the new cells."

The actual transplant, performed in November 2011 at Presbyterian/St. Luke's Medical Center in Denver, was almost anti-climactic, Adele said, just like a blood transfusion.

Because she had a brand-new immune system after the transplant, she had to stay in a special clean unit for another three weeks and then live within five minutes of the hospital for another two months. She had to undergo regular tests, limit her exposure to anything that could cause infection, and monitor to see if her new immune system began attacking her body.

But she was determined to spend Christmas with her husband and two children even if it meant everyone staying in a hotel in Denver.

CSU community support

Adele credits the CSU community for making it possible for her to recover and to be back on campus.

"I had support from my entire department, from my department chair, the Dean of the College of Natural Sciences, the Provost and all my colleagues, who chipped in to help with everything," Adele said. "I couldn't be left alone once I left the hospital, so they put together an online signup sheet for sleepovers in Denver, as well as helping my husband with the kids and meals and everything. I couldn't have done it without them."

The department also helped Adele ease back into teaching while she still had to limit her exposure to large groups of people; she taught her first undergrad class this fall, and has had perfect blood work at every test.

"I have a different perspective on life now," she said, beyond the physical effects of less strength and more fatigue. "I long for the days when I could take my life for granted. The myth that we all want to believe is that after something like this, everything goes back to normal. It doesn't, but I'd like to help reduce the fear that others must face. With the support of your community, there is life and hope."

With the help of her colleagues, Adele wrote an elaborate thank-you letter in 15 languages, to be forwarded to the donor somewhere in Europe. She finally heard from her donor, a 22-year-old preschool teacher who lives in Germany, in March.

LAURA'S LEGACY

The CSU connection to the National Marrow Donor Program runs deep. The first successful bone marrow transplant from an unrelated donor was received by the daughter of two alumni in 1979. The dedicated efforts of Robert Graves (‘54, DVM ‘56) and Sherry (Girmann) Graves (‘57) on behalf of their daughter, Laura, resulted in federal funding and Congressional authorization for a registry of potential marrow donors in 1986.

Read the whole story in the Spring 2009 edition of Around the Oval, http://issuu.com/alumni.colostate.edu/docs/a-oval_sp09/14. And come to the Spring Registry Drive on April 22, 10 a.m. – 2 p.m., on the Plaza and share some cells.
EARTH WEEK EVENTS

Here are some highlights of the many environmentally friendly events and presentations set to mark this year’s Earth Week on the CSU campus. Go to green.colostate.edu/earth-week.aspx for a complete schedule of events.

Thursday, April 17
Powerhouse Energy Campus Grand Opening
3-5 p.m.
430 N. College Ave.
See the new home of all things energy at CSU. RSVP by April 14, online at https://advancing.colostate.edu/POWERHOUSE-GRANDOPENING, or to the Office of CSU Events (877), 498-7787.

Monday, April 21
John Fielder: Colorado Wilderness 50 Celebration
7-9 p.m.
Griffin Concert Hall
University Center for the Arts
CSU's Warner College of Natural Resources is proud to host renowned Colorado nature photographer John Fielder as he presents a celebration of the 50th anniversary of the Wilderness Act through his stunning photography of Colorado's wilderness. Sponsored by the Warner College of Natural Resources.

Tuesday, April 22
Earth Day Festival and Alternative Transportation Fair
10 a.m. – 2 p.m.
West Lawn of Lory Student Center
The Earth Day Festival is a celebration of sustainability at CSU and in the community. Staff, students, and faculty are all welcome to the event. Live music, baked goods from the bake shop, and much more will be at this year's festival, an opportunity to learn about more about the sustainability community at CSU. Sponsored by Housing & Dining Services, Live Green Team, Parking and Transportation Services and SEEAC.

Biodiversity Ignite!
5 - 7 p.m.
Avogadro’s Number, 605 S. Mason St.
Biodiversity Ignite! is an evening of fun and informative five-minute talks that showcase and recognize the range of valuable biodiversity research being conducted at CSU. Please join us in celebrating the many important aspects of biodiversity across our planet. Sponsored by the School of Global Environmental Sustainability and the SoGES Biodiversity Working Group.

Friday, April 25
2014 CSU Tree Campus USA and Arbor Day Celebration
9:30 a.m. – noon
University Center for the Arts
Celebrate Colorado State University's third year being recognized as a Tree Campus USA by the Arbor Foundation and help plant some new trees to keep the campus looking beautiful. Planting instruction will be provided by CSU Facilities and the Colorado State Forest Service. Sponsored by Center for Collaborative Conservation, Colorado State Forest Service, Forest & Rangeland Stewardship, Student Organizations, Warner College of Natural Resources.

E-waste Collection/Compost Giveaway
1 – 3 p.m.
Moby Arena parking lot
Have you been holding onto some old or outdated electronics for a while and are not sure what to do with them? Bring them to the Compost Giveaway/e-Waste Collection on Friday, April 25, 1 p.m. – 3 p.m. The collection will be located on the far west side of the Moby Arena parking lot. Sponsored by Surplus Property.

Here are some highlights of the many environmentally friendly events and presentations set to mark this year’s Earth Week on the CSU campus. Go to green.colostate.edu/earth-week.aspx for a complete schedule of events.
How are CSU faculty and staff spending their tax refund this year?

By Sarah Sparhawk / photos by Sharylyn Boyle

“I spent it on a Hyundai Tiburon, a car.”
Ryan Malone, Library Help Staff

“For my wedding on August 9th”
Patrick Dorian, Anthropology

“I have to go to Montreal for a conference, so we will probably use the refund money to turn that into a family vacation. And if there is any left over, biking equipment for me.”
Patrick Plaisance, Journalism

“At Rodizio Grill, every meal is fresh, homemade, and authentic.

- Sizzling grilled meats carved tableside, fresh off the grill
- Traditional appetizers and salad bar items made from scratch
- Tempting desserts crafted in house from age-old Brazilian recipes

Old Town, Fort Collins 970-482-3103

COMMUNITY EVENTS

From page 1

CSU Day here in Fort Collins? Today we get a proclamation from the Governor sharing the love with the entire state.

Spring Bone Marrow Registry Drive
April 22, 10 a.m.-2 p.m.
Lory Student Center Plaza
Stop by for a painless cheek swab and put your name on the potential donor list. See the story in this issue to see what might happen next.

11th annual Fast & Furriest 5K
April 26, 9 a.m.
CSU Oval
A family-friendly event for individuals and their furry friends of all ages and abilities. The race will feature chip timing on a certified course, doggie demos, awards, giveaways, a 1K fun-run for children, music, face painting, and more. Proceeds benefit animals in need of emergency or life-saving treatments through the Companion Care Fund at the Veterinary Teaching Hospital. Register at www.active.com

Awards, Awards, Awards
April 28-30
The last week in April is when the CSU family takes time to recognize all the good work that goes on here on campus all year long. The Alumni Association will honoring the 2014 Best Teacher Award recipients April 28, from 6:30 to 9 p.m., at the Drake Center, 802 W. Drake Road. Tickets are $15 for Alumni Association members, $20 for nonmembers and guests, and $6 for CSU students. RSVP by April 21 to advancing.colostate.edu/BESTTEACHERAWARDS2014 or call (970) 491-6533.

Celebrate! Colorado State Awards will be presented to all faculty, staff and students who have earned an award this academic year on April 29, 3-5 p.m. in the Lory Student Center Theater; no tickets required. Faculty and staff celebrating significant years of service with CSU will be recognized at the Celebrate! CSU Milestones event, April 30, 4-6 p.m. in the Hilton Fort Collins ballroom, also a free event.

President’s Community Lecture Series
April 30, 6:30 p.m.
Lory Student Center North Ballroom
University Distinguished Professor Diana Wall will present “Lessons from an Antarctic Desert: The hidden world and response to climate change,” that will delve into the depths of Antarctica’s dry valleys – including Wall Valley, which bears her name. The event is free and open to the public, but tickets are required and available at https://advancing.colostate.edu/PRESLECTURESERIESAPR14.

ENTERTAINMENT CALENDAR

Theater

The Tempest by William Shakespeare
Through April 26, 8 p.m.; 2 p.m. Sunday matinees
OpenStage Theatre in the Magnolia Theatre - Lincoln Center
Tickets: $18-$28

In Shakespeare’s beloved fantasy, enchantment, humor, and justice entwine to tell one of the Bard’s final tales about embracing a brave new world.

Ictix.com

I, Claudia by Kristen Thomson
Through May 4, 7:30 p.m., 6:30 p.m. Thursdays; Sunday matinees at 2:30 p.m. except April 20.
Bas Bleu Theatre, 401 Pine St.
Tickets: $17-$25

“I, Claudia” charts the raw but beautiful interior world of a misfit adolescent through four characters performed by one actress in masks.

basbleu.org

Alice in Wonderland
April 24-27, May 1-4, 7:30 p.m., matinees April 26-27, May 3-4, 2 p.m.
University Center for the Arts
Tickets: $8/CSU students and under 18, $18/adult

A new stage adaptation of the book by Lewis Carroll. Directed by Eric Prince, with music by David Hörger.

This world premiere of a new stage adaptation of one of the most cherished, beguiling, and kaleidoscopic journeys in all literature features specially composed original music and song, drawing on Victorian hymns, nursery rhyme, jazz and English folksong, all designed to create a dazzling, vibrant theatrical experience. Faithful to the original tale, this production will surprise and excite the senses in multiple dizzying ways and bring the wonder of Alice’s wonderland back to life.

A Mad Hatter’s Tea Party reception will be hosted by Friends of the UCA in the Griffin Lobby before the April 26 matinee for all performance attendees.

csuartstickets.com

Art & Literature

Friends of the Libraries Authors Series

April 16, May 5, 7 p.m.
Hilton Fort Collins
425 W. Prospect Road
Free admission

Novelist Hannah Kent will bring her historically based Burial Rites to the Hilton on April 16. On May 5, Elizabeth Silver will present her novel, The Execution of Noah P. Singleton. The Evening with an Author Series is presented by Friends of the CSU Libraries, the Poudre River Friends of the Library, City of Fort Collins Fort Fund, and KUNC radio; Old Firehouse Books will have copies of the books for signing sale at the event.

MFA Thesis Exhibition
April 11-May 17, opening reception April 11, 6 p.m.
University Art Museum
Free admission

This annual show marks the culmination of a three-year degree program in the visual arts that fosters individual research and creative studio practice. This year’s exhibition features the work of Jennifer Brakefield, Deborah Craven, Rachel Davis, Michael De La Cruz, Maria Hettinga, Charles Luna, Michael McGee, Jennifer Titone, and Eleanor Wilson.

Poetry Reading and Seminar: Robert Hass & Brenda Hillman
April 24-25, 7:30 p.m.
Lory Student Center North Ballroom
Free admission

Music & Dance

Percussion Ensemble Concert
April 12, 6 p.m.
Instrumental Rehearsal Hall
University Center for the Arts
Tickets: Free but seating is limited; tickets required

The CSU percussion ensemble performs contemporary works for a variety of percussion instruments, as well as Reconcilable Differences for marimba soloist, CSU faculty Eric Hollenbeck. Featuring members of the Vastanta percussion quartet and a performance by special guest Brian Zator.

Classified staff appreciation, representation fuels the engine of the CSU school bus

By Delva DeVilbiss

State Classified staff are the engine that keeps the CSU school bus running. In addition to employees in trades, facilities, and housing and dining, many State Classified employees are in academic departments, business and finance, sponsored programs, HR, and student services. They ensure that the business of the university gets done. Without the dedicated follow-through of State Classified personnel, this school bus would grind to a halt.

The Classified Personnel Council (CPC) knows that for an engine to run, it needs fuel. Appreciation is one kind of fuel they can provide to the University, so every effort is made to create events and support structures that demonstrate how much our State Classified staff is valued.

The most welcomed annual event is a hot August afternoon ice cream social amongst the beautiful flowers by the gazebo in the CSU Trial Gardens. Who could possibly turn down a photo with CAM the Ram? You may have also attended the Veterinary Teaching Hospital’s Employee Appreciation Day this past November. That event was a joint effort between CPC and the Administrative Professional Council (APC) to promote employee appreciation, and to share the vet hospital with the CSU community.

Another type of fuel is representation. CPC represents State Classified issues to the VP of Operations, Amy Parsons, on a monthly basis, bringing staff concerns to her direct attention. CPC members serve on 16 standing University committees at CSU, and also send representatives to the Statewide Liaison Council to meet with representatives from other Colorado universities to discuss common issues and gather new ideas for serving our constituents. CPC invites governmental representatives to the monthly meetings. For example, state Rep. Randy Fischer was at the November meeting.

Anyone can attend a CPC meeting, so check it out! For more information, past meeting minutes and the schedule, please visit: [http://cpc.colostate.edu/](http://cpc.colostate.edu/)

Trial Gardens

competition. “We have to have at least 10 entries in a category to judge the plant,” Klett said. Each category is judged on overall plant growth, number of flowers, uniformity, and if there was any disease or insect problems with the plant. Judges include growers, seed and vegetation companies, master growers, and parks personnel. Once the best of the categories are chosen, a final best-of-show plant is chosen as the top plant of the entire season. The plants are judged approximately a month later to determine if their success was sustaining.

This year’s Best of Show winner is Lantana ‘Lucky Sunrise Rose,’ announced earlier this month.

For more information about the trial gardens, or the results of past trials, visit [www.flowertrials.colostate.edu](http://www.flowertrials.colostate.edu).

Larimer County master gardener Craig Seymour helps with the flowers in the greenhouse before they are planted at the Trial Gardens, above.

An ice cream social in the Trial Gardens is just one way the Classified Staff Council shows appreciation for all CSU employees do. Photo courtesy CPC.
Q. I am recently divorced and have been experiencing a lot of very difficult emotions. For example, I changed my name back to my maiden name after 21 years. This was one of the hardest things I’ve had to do. One of my friends said I should be happy and relieved to have my old name back. She doesn’t understand why this upsets me so much. Is there something wrong with me that I am so upset at having changed my name back to my maiden name?

A. Divorce is a common loss in our society. When someone we love dies, we expect it to be very painful and difficult to overcome. We expect non-death losses to be less painful, less confusing and less difficult, but this is often not the case. Divorce for many people can be an extremely raw, sorrow-filled, and disorienting loss. Divorce is not one loss but a series of very deep hurts — from the loss of a sense of safety to financial insecurity, or the loss of the fantasy of a happy future with the person you married.

Identity Crisis

In addition to losing a partner, lover, companion and housemate, you may experience the loss of your own identity and a sense of who you are in the world. Changing your married surname back to your maiden name is not only a loss of identity, it is also a very tangible indicator of the losses associated with the divorce. The change of your name requires a series of time-consuming forms to fill out and submit in very formal settings. It also requires you change how you sign, type and say your name from now forward. Every time you see or say your new name it is a painful reminder of the losses associated with the divorce itself as well as the months and years leading up to the divorce that probably continue to hold deep sadness for you.

There is no doubt that divorce brings with it some level of an identity crisis. While taking your new husband’s name 21 years ago may have felt exciting and joyful, having it removed and replaced with the name you had growing up can make you feel all sorts of confusing and sometimes bad feelings. Some women say they don’t know who they are anymore after a divorce. Their identity had long ago become that of a companion and housemate, you may experience the loss of your own identity, it is also a very tangible indicator of the losses associated with the divorce. The change of your name requires a series of time-consuming forms to fill out and submit in very formal settings. It also requires you change how you sign, type and say your name from now forward. Every time you see or say your new name it is a painful reminder of the losses associated with the divorce itself as well as the months and years leading up to the divorce that probably continue to hold deep sadness for you.

At the Fort Collins Museum of Discovery, veterinary service learning means examining animals that many people would rather see than feel: endangered ferrets, salamanders, tarantulas and even a python named “Slinky.” But caring for creepy-crawlies is all in a day’s work for vet students learning about avian, exotics and zoological medicine in CSU’s renowned veterinary school.

Students helping with the display said their efforts are a way to contribute to the community and to veterinary medicine.

“Exhibits like this can definitely inspire a child into deciding what they want to do when they grow up,” said Laura Clough, a fourth-year student in the CSU Professional Veterinary Medicine Program. “Being face-to-face with these types of creatures allows kids to discover something new and to develop a profound connection with different species. It teaches them a sense of compassion for all living things that they can’t learn anywhere else.”

Three of eight colleges on the CSU campus are contributing expertise to the museum’s new collection of amphibians, arthropods, fish, mammals and reptiles: the College of Veterinary Medicine and Biomedical Sciences, Warner College of Natural Resources and the College of Agricultural Sciences.

“This new exhibit provides our veterinary students with the opportunity to get out and do something for their community,” said Dr. Matt Johnston, associate professor of zoological medicine. “The museum has brought animals to the Veterinary Teaching Hospital in the past, but this larger exhibit lets us come to them. It allows us to fulfill our missions of education and outreach.”

Before the opening of the exhibit in March, Johnston walked with students, posing questions and urging aspiring veterinarians to think critically about caring for animals they might never have seen up-close, like the endangered black-footed ferret.

“I am so grateful and excited to have these types of opportunities readily available to me,” Clough said. “Dr. Johnston gives his students the chance to really engage in interesting cases. Every day, I get to fully experience and learn something new.”
Part of the traditional Southeast Asian diet, coconut oil has taken our country by storm. It is sometimes hailed as a superfood and sometimes criticized as a fad. What is the truth behind this tropical food?

Coconut oil is a fat taken from coconut flesh. Coconut oil comes from dried coconut treated with chemicals to produce the oil, which is used in movie theater popcorn, coffee creamer and candy. Virgin coconut oil is a more recent alternative: this fat is extracted from coconut meat in a multistep process. Both contain saturated fat, the “bad” fat that raises levels of total cholesterol and LDL, the “bad” cholesterol.

But not all saturated fats are created equal. Sixty percent of coconut oil fat is composed of medium-chain triglycerides, also called MCTs, while other oils contain mostly long-chain triglycerides, known as LCTs.

MCTs are metabolized differently than LCTs; they are transported directly from the digestive tract to the liver, where they are used as fuel. They are less likely to be deposited into fat tissue. This makes coconut oil a popular weight-loss product.

Only if you watch your calories and keep them low — coconut oil calories are still stored as fat once your body’s fuel needs are met. At 120 calories per tablespoon, nobody is going to lose weight by adding this to their typical diet. The bottom line: Skip the coconut oil, eat less and move more.

Other recent claims

Alzheimer’s disease? A popular book describes a man whose Alzheimer’s symptoms improved dramatically after eating coconut oil (and MCT oil) daily. Theoretically, the Alzheimer’s-diseased brain can use ketones produced from MCTs to replace the glucose it is no longer able to use, but the few studies done have been poorly designed and inconclusive. The bottom line: More research is needed.

Heart disease? Research participants fed coconut oil or pure MCTs showed an increase in LDL and total cholesterol, but also an increase in HDL (good) cholesterol, which offers protection against heart disease. Unfortunately, an increase in HDL when LDL also increases probably does not lower the risk of disease. The bottom line: Vegetable oils such as olive oil still are recommended because they increase HDL while also lowering LDL.

Best oil for cooking? For a vegan or anyone limiting animal products, coconut oil is a tasty butter replacement. For others, it adds a unique flavor to food and can be used instead of shortening for baking. It also gives food a unique texture and cooking characteristics. The bottom line: Enjoy coconut oil in small amounts if you like the taste or texture, but be wary of its touted health benefits.

Take a cue from the Pacific islanders who consume coconuts on a regular basis: Enjoy coconut oil as part of a diet that is low in sugar, cholesterol and salt; high in fiber, plant foods and fish; and part of a physically active lifestyle.

Melissa Wdowik is an assistant professor at Colorado State University in the Department of Food Science and Human Nutrition and director of the Kendall Anderson Nutrition Center.
“Food for the body is not enough. There must be food for the soul.” - Dorothy Day

Red, White, and Green Salad

As a Colorado State extension specialist for more than 30 years, Pat Kendall developed a reputation as one of the top experts in the country in food safety education. From 1997-2000, Kendall also served as associate head, interim head, and graduate programs coordinator for the Department of Food Science and Human Nutrition, eventually joining the College now known as Health and Human Sciences as associate dean for research in 2009. She retired in 2013.

Kendall’s weekly column, Nutrition News, appeared from 1976 to 2006 in close to 30 newspapers in Colorado, including the Fort Collins Coloradoan, the Denver Post, and the Rocky Mountain News. A conversation with Kendall offers insight into how our knowledge of nutrition, behavior, and eating habits has evolved throughout the decades. “Childhood obesity wasn’t a problem when I started writing the column, but has become a challenging issue for society today,” she points out.

Pat gives us a delicious and nutritious salad for the beginning of spring.

Ingredients

Salad:
- 4 cups torn mixed greens and/or baby spinach
- 2 Tbsp. thinly sliced red onion pieces
- 1 cup sliced fresh strawberries
- ½ cup crumbled feta cheese
- ¼ cup toasted sliced or slivered almonds

Dressing:
- 3-5 strawberries (chopped)
- 2 Tbsp. balsamic vinegar
- 2 Tbsp. extra virgin olive oil
- 1 tsp. honey or brown sugar (to taste

Directions

1. To prepare dressing, combine 3-5 chopped strawberries with a dash of balsamic vinegar in blender and puree until smooth. Pour pureed strawberries into a small bowl, add remaining balsamic vinegar, olive oil and honey or brown sugar. Wisk until smooth.
2. To prepare salad, combine torn greens, onion, strawberries, feta cheese and almonds in 4 individual salad bowls or in one large bowl.
3. Add dressing just before serving.

Variations:
- Goat, blue or gorgonzola cheese substitute well for the feta cheese.
- Toasted and/or honey glazed pecans or walnuts substitute well for the almonds.
- For variety, add thinly sliced red peppers, sliced mushrooms, or other favorite vegetables.
- Use any favorite balsamic vinaigrette dressing for the prepared dressing.

Nutrition Information per ¼ recipe (approximately 1 ½ cups):
This salad provides 125 calories per serving (200 with dressing), 5 grams of protein, 11 grams of carbohydrates and 8 grams of fat (23 grams with dressing). It also provides 50 percent of your daily recommended intake of vitamins A and C, 18 percent of recommend calcium intake, and 10 percent of recommended fiber and iron intake.
**PET HEALTH**

**Pets need good dental care, and that requires general anesthesia**

*By Dr. Camille Torres-Henderson*

Dental disease is one of the most common problems identified during an exam at the veterinary office.

Signs of dental disease, which pet owners may notice, include yellow or brown tartar build up, bad breath, difficulty chewing or bleeding from the gums after chewing. These are signs of bacteria and inflammation.

To address this condition, your veterinarian will recommend a dental cleaning. Because our pets cannot understand what we are asking of them, it is impossible to perform a thorough oral exam or dental cleaning while the pet is awake.

Anesthesia is required for a proper dental cleaning for your pet. While your pet is under anesthesia, an ultrasonic, sonic or hand scaler will be used to clean all sides of the tooth, both above and below the gum line.

**Preventing periodontal disease**

Cleaning below the gum line is one of the most important steps of the procedure because this is where bacteria lurk, gradually breaking down the attachment between the tooth and the bone – the condition known as periodontal disease.

According to the American Veterinary Medical Association, periodontal disease is the most common clinical condition in cats and dogs even though it’s completely preventable. That’s significant because the condition can lead to tooth loss and can damage the heart, kidneys and other internal organs, negatively impacting overall pet health.

After cleaning with a scaler, the teeth are polished to smooth out microscopic scratches from the scaler.

**Home dental care**

Home dental care is recommended to help maintain oral health in between cleanings. This may involve brushing the teeth of your dog or cat, one of the most effective ways to maintain oral health; use of a chlorhexidine oral rinse; and possible dental diets, with textures that provide a cleansing effect.

For tips on brushing pet teeth, watch this AVMA YouTube video. www.youtube.com/watch?v=wB3GIjAqTPE

**The need for anesthesia**

We recommend that pet dental cleanings be performed with anesthesia. In fact, veterinarians must intubate and anesthetize pets for dental procedures – including cleanings – for their hospitals to earn or maintain accreditation from the American Animal Hospital Association (AAHA), according to a mandatory standard adopted in August 2013.

“The guidelines state that general anesthesia with intubation is necessary to properly assess and treat the companion animal dental patient,” AAHA President Kate Knutson explained. “Because AAHA practices are expected to uphold the highest level of veterinary excellence, AAHA’s leadership felt it necessary to update this dental standard so that they reflect best practices outlined in the guidelines.”

Those of us at the Colorado State University Veterinary Teaching Hospital agree with the standard, in part because pets undergoing dental cleaning without anesthesia would move during scaling; scalers are sharp instruments, so an inadvertent poke would cause trauma and pain in the oral tissues.

Without anesthesia, the pocket below the gum line and the inside part of the tooth, closest to the tongue, could not be adequately cleaned; this would result in progression of dental disease, along with possible tooth loss and chronic pain.

Note that only licensed veterinarians, or technicians working under the direct supervision of licensed veterinarians, are legally permitted to perform pet dental services.

If you have questions about pet dental care, or the standards for that care, be sure to ask your veterinarian! Good oral health contributes to good overall health.

Dr. Camille Torres-Henderson is a veterinarian with the Community Practice service at Colorado State University. James L. Voss Veterinary Teaching Hospital. Community Practice provides general care, wellness care and treatment for minor injuries and illnesses for pets.

**MEET JABBER!**

Jabber, a 1-year-old male Silkie chicken, has soft and fluffy black feathers. Silkies are considered an exceptional pet because of their calm and friendly temperaments. This good-looking fellow can be your feathered friend for $5, but only outside the Fort Collins city limits.

To visit with featured pets or any other adoptable animals, stop by Larimer Humane Society at 6317 Kyle Ave. in Fort Collins. The Shelter is open 11a.m.-7p.m. Monday through Friday, and 10a.m.-5p.m. Saturday and Sunday. For more info, call (970) 226-3647 or visit larimerhumane.org.
